

The City and County of Honolulu have added an Extreme Tsunami Evacuation Zone, or XTEZ, to the Tsunami Information Tool. The XTEZ does not replace the current tsunami evacuation zone, but rather adds a second zone for a potential extreme event.

XTEZ events are low probability but they represent high-impact “worst-case” inundations.

For most “Tsunami Warnings,” evacuate out of the red zone; in the unlikely case of an “Extreme Tsunami Warning,” evacuate out of the red and yellow zones.

**Red** – *Tsunami Evacuation Zone*: For any **Tsunami Warning**, evacuate out of these areas.

**Yellow** – *Extreme Tsunami Evacuation Zone*: Evacuate out of these areas for an **Extreme Tsunami Warning**.

**Green** – *Safe Zone*: Evacuate to this area.

1. TSUNAMI WARNING: Destructive waves from a tsunami may inundate all coastlines; evacuate red areas
2. EXTREME TSUNAMI WARNING: In the unlikely event of an extreme tsunami, waves may move significantly inland; evacuate red and yellow areas
